

Modelling Exercise

- For the given requirement statement (in natural language) create three **interrelated** representations to capture:

- Data** (or static or conceptual) **model** using UML class diagrams
- Behavioural model** using UML state diagrams
- Functional model** using UML sequence diagrams

- Requirement (natural language):**

- If a glass break detector attached to the entrance door detects that the entrance door has been damaged, the system shall enter the alarm state and inform the security company.*

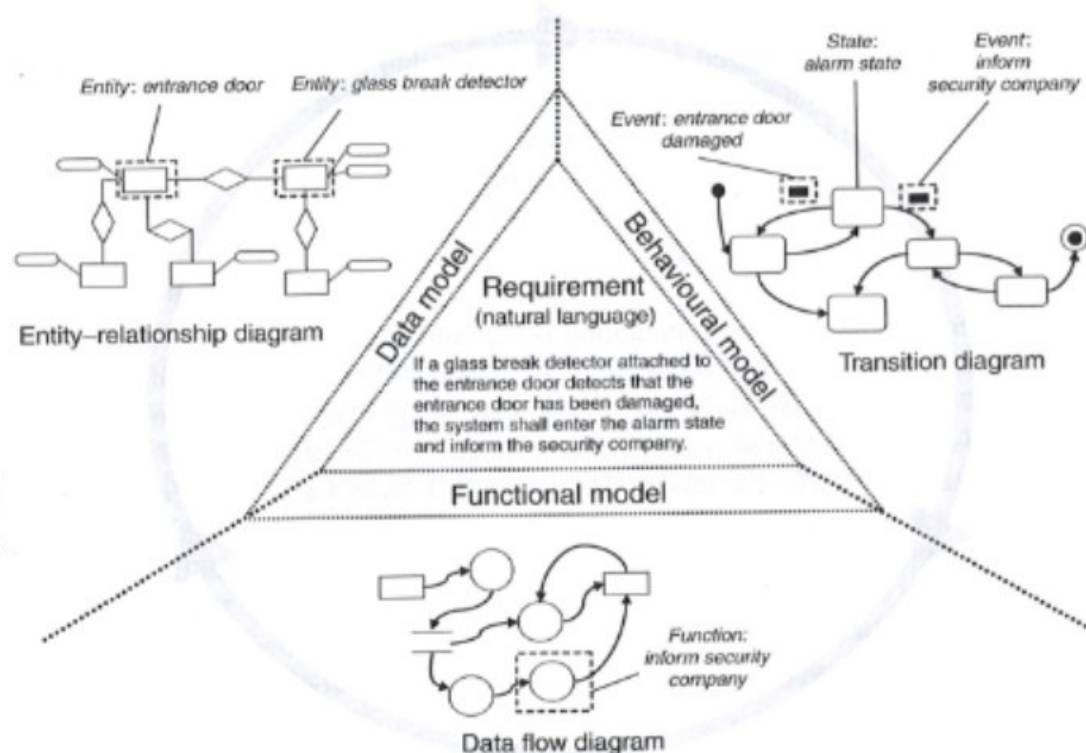

建模练习

- 对于给定的需求陈述（以自然语言），创建三个相互关联的表示来捕获：

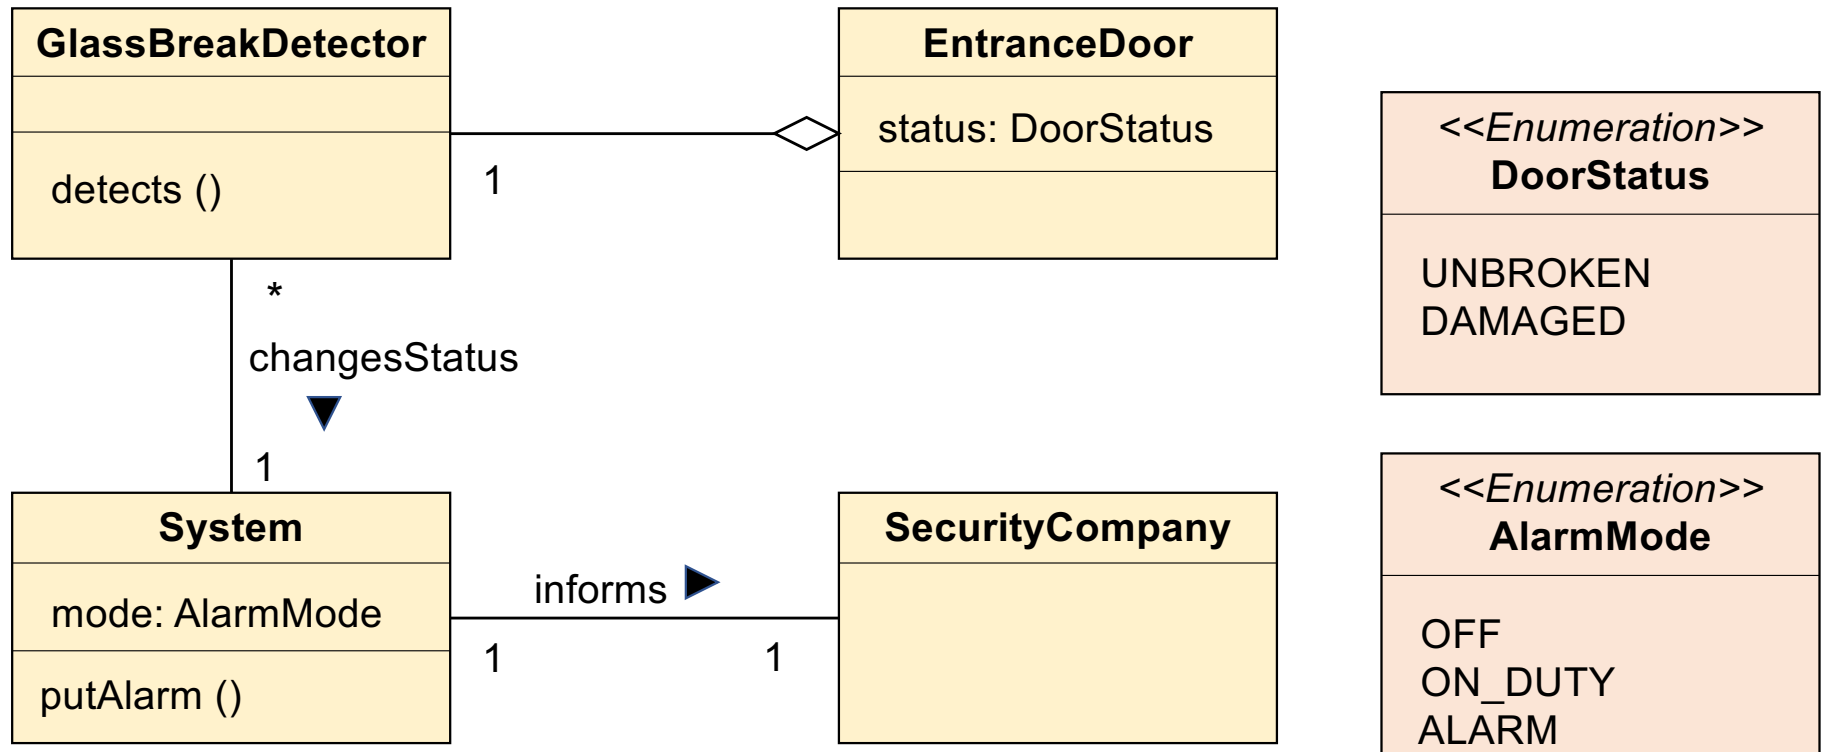

- 使用 UML 类图的数据（或静态或概念）模型
- 行为模型
使用 UML 状态图
- 功能模型
使用 UML 序列图

- 要求（自然语言）：

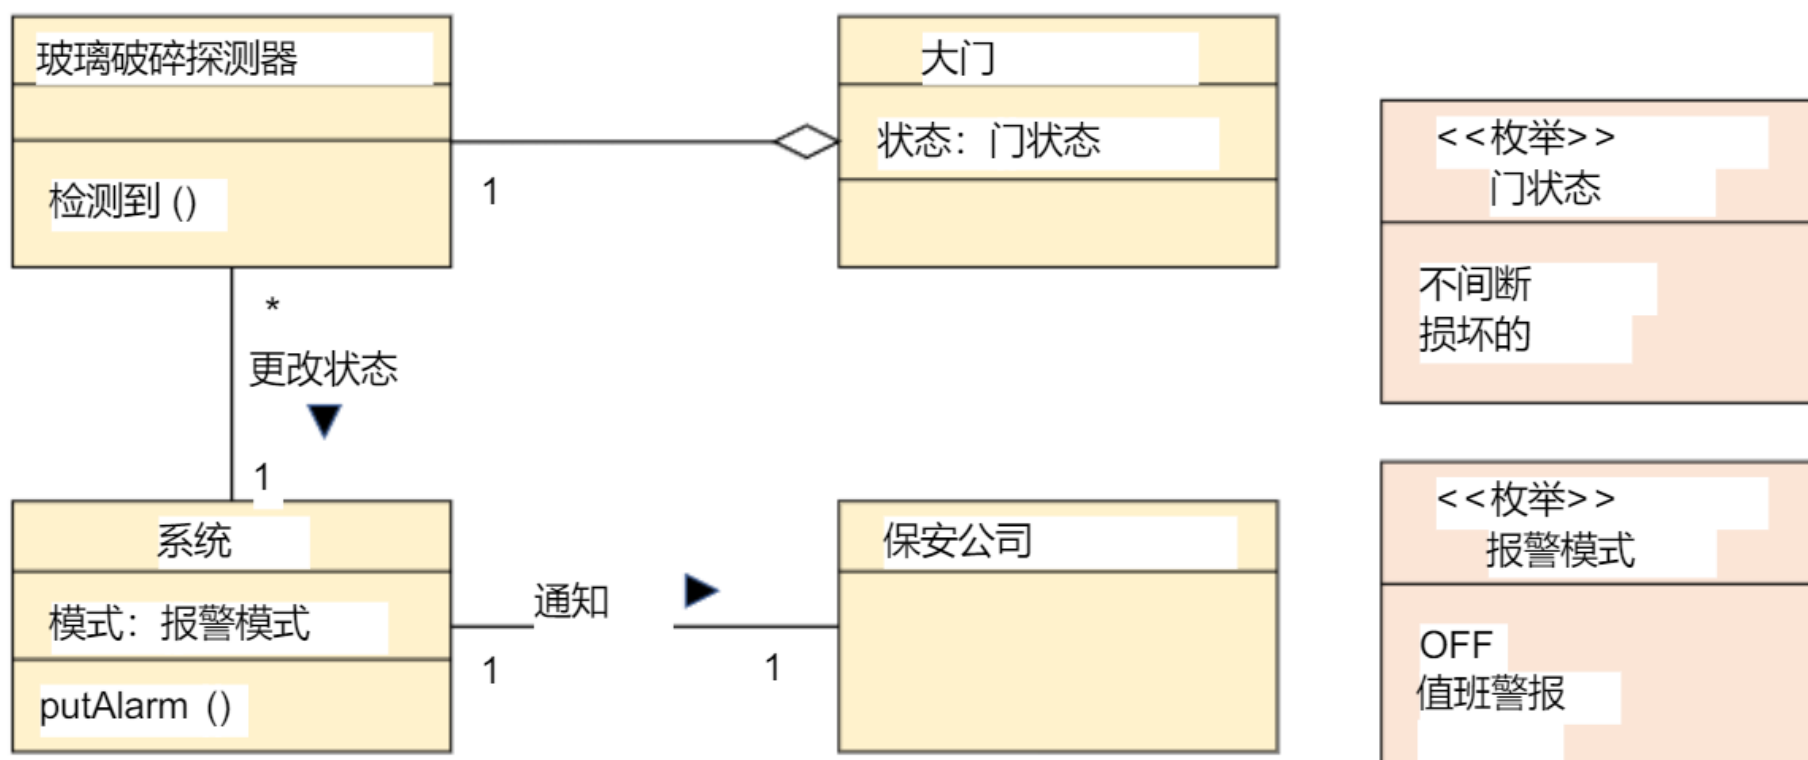

- 如果入口门上安装的玻璃破碎探测器检测到入口门已损坏，系统将进入报警状态并通知保安公司。

Static model

静态模型

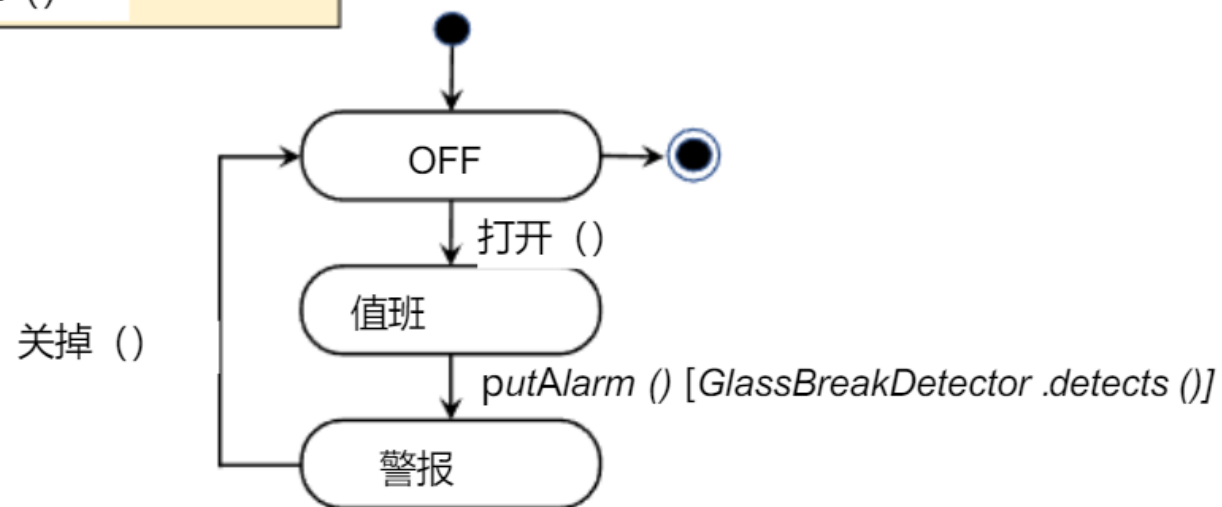

Behavioural model

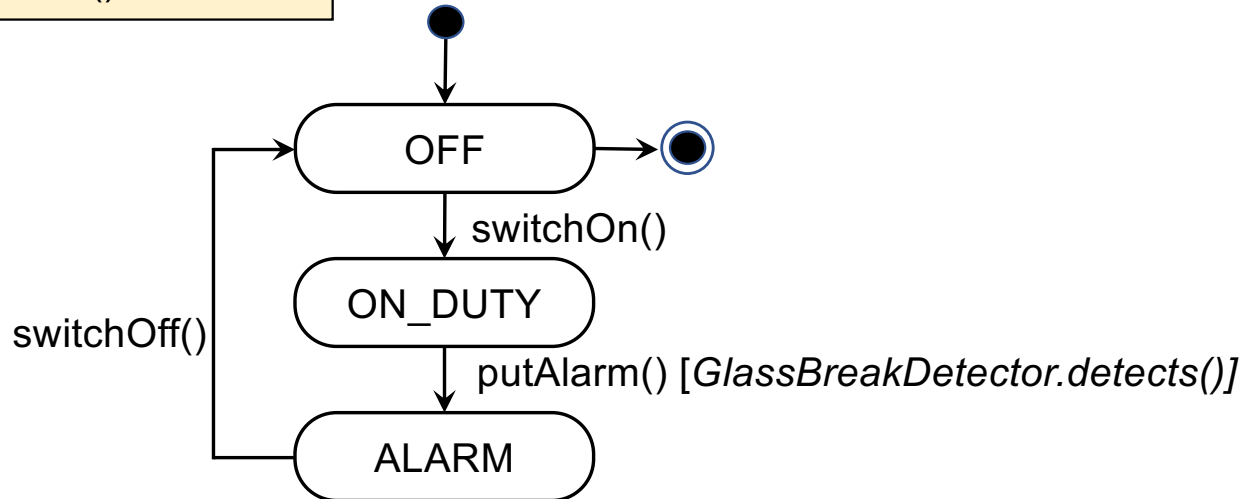

行为模型

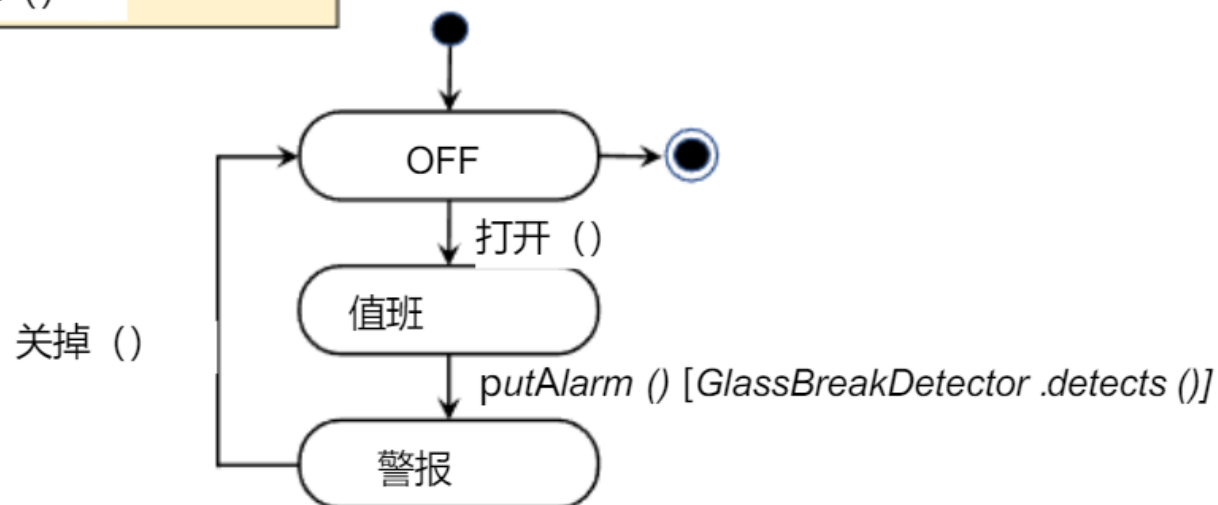

: 系统
模式: 报警模式
putAlarm () 打开 () 关掉 ()

Behavioural model

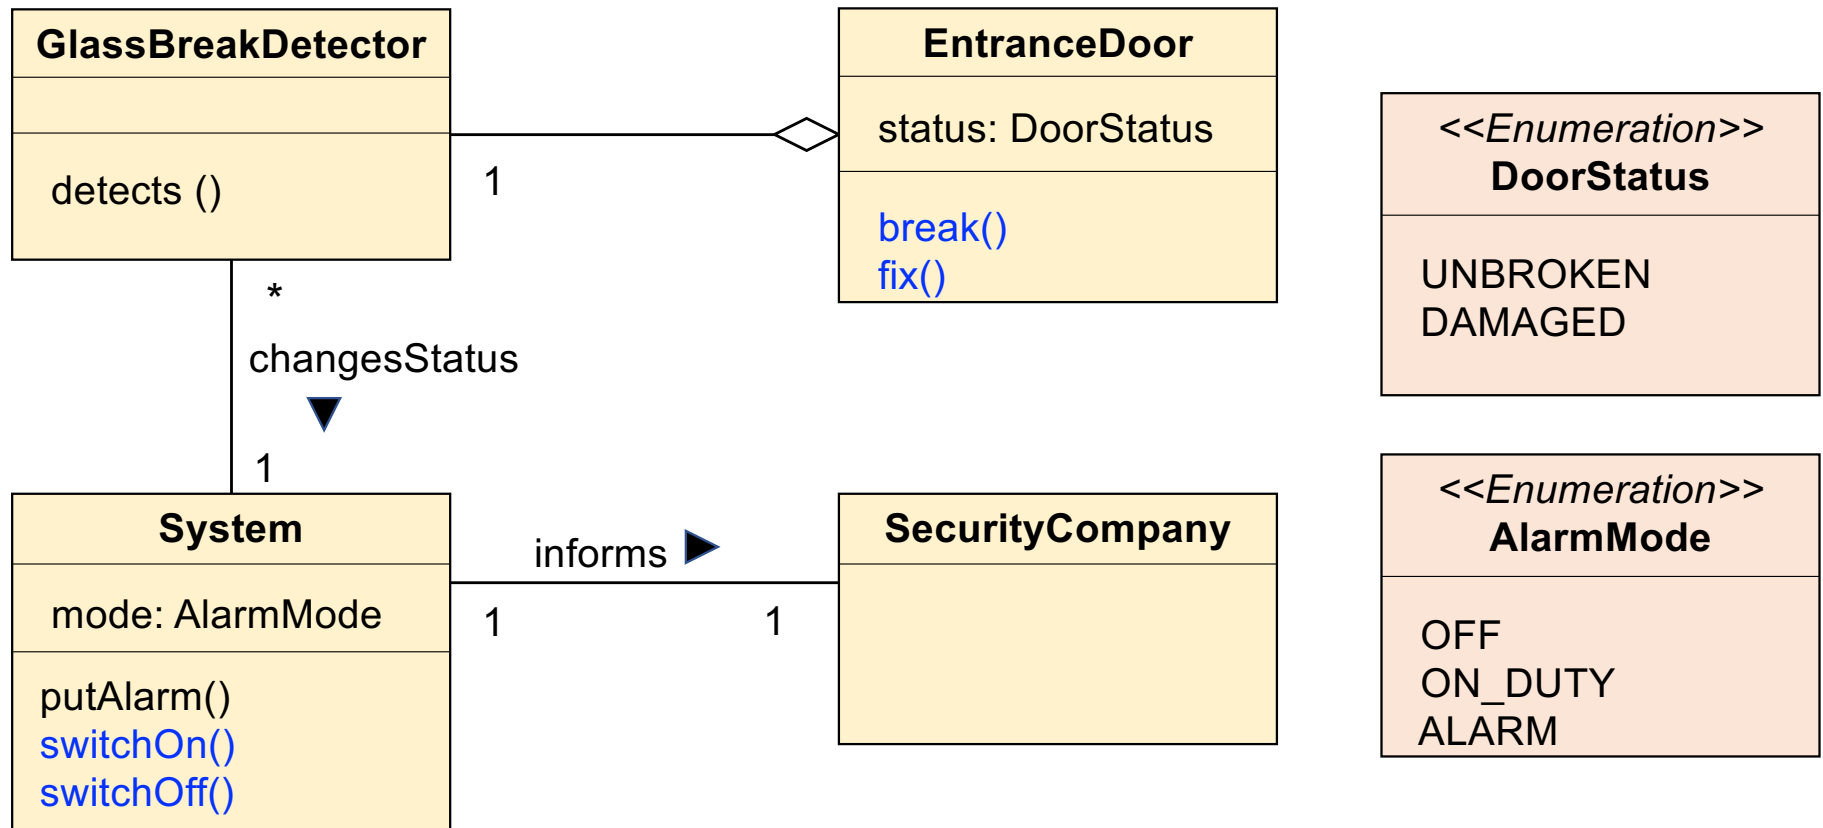

行为模型

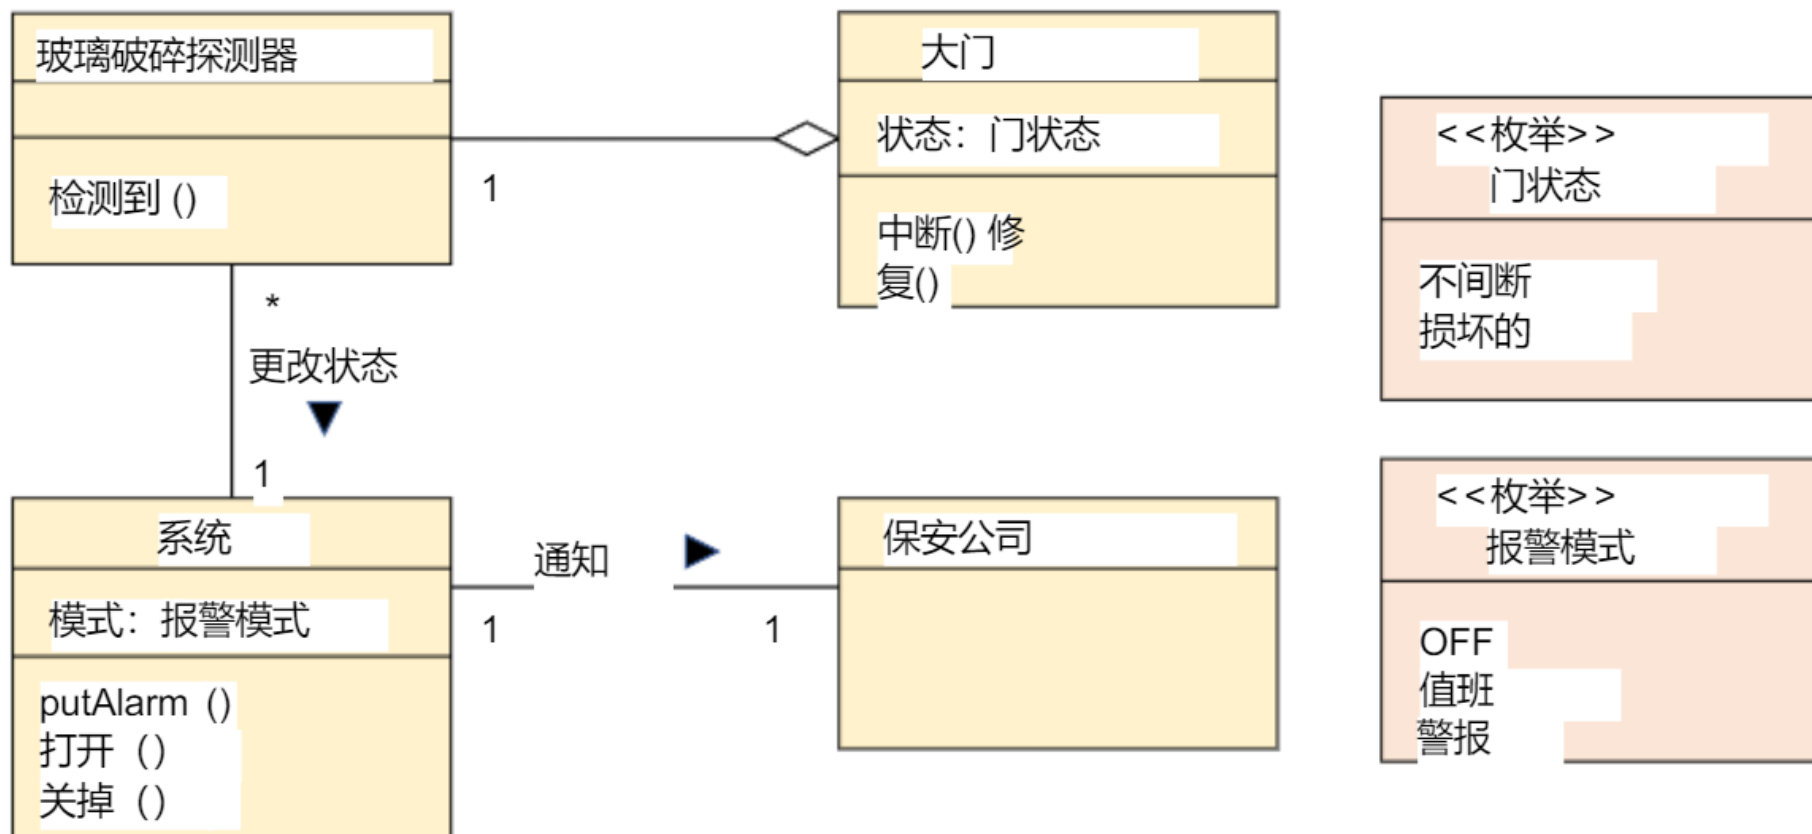

Static model:

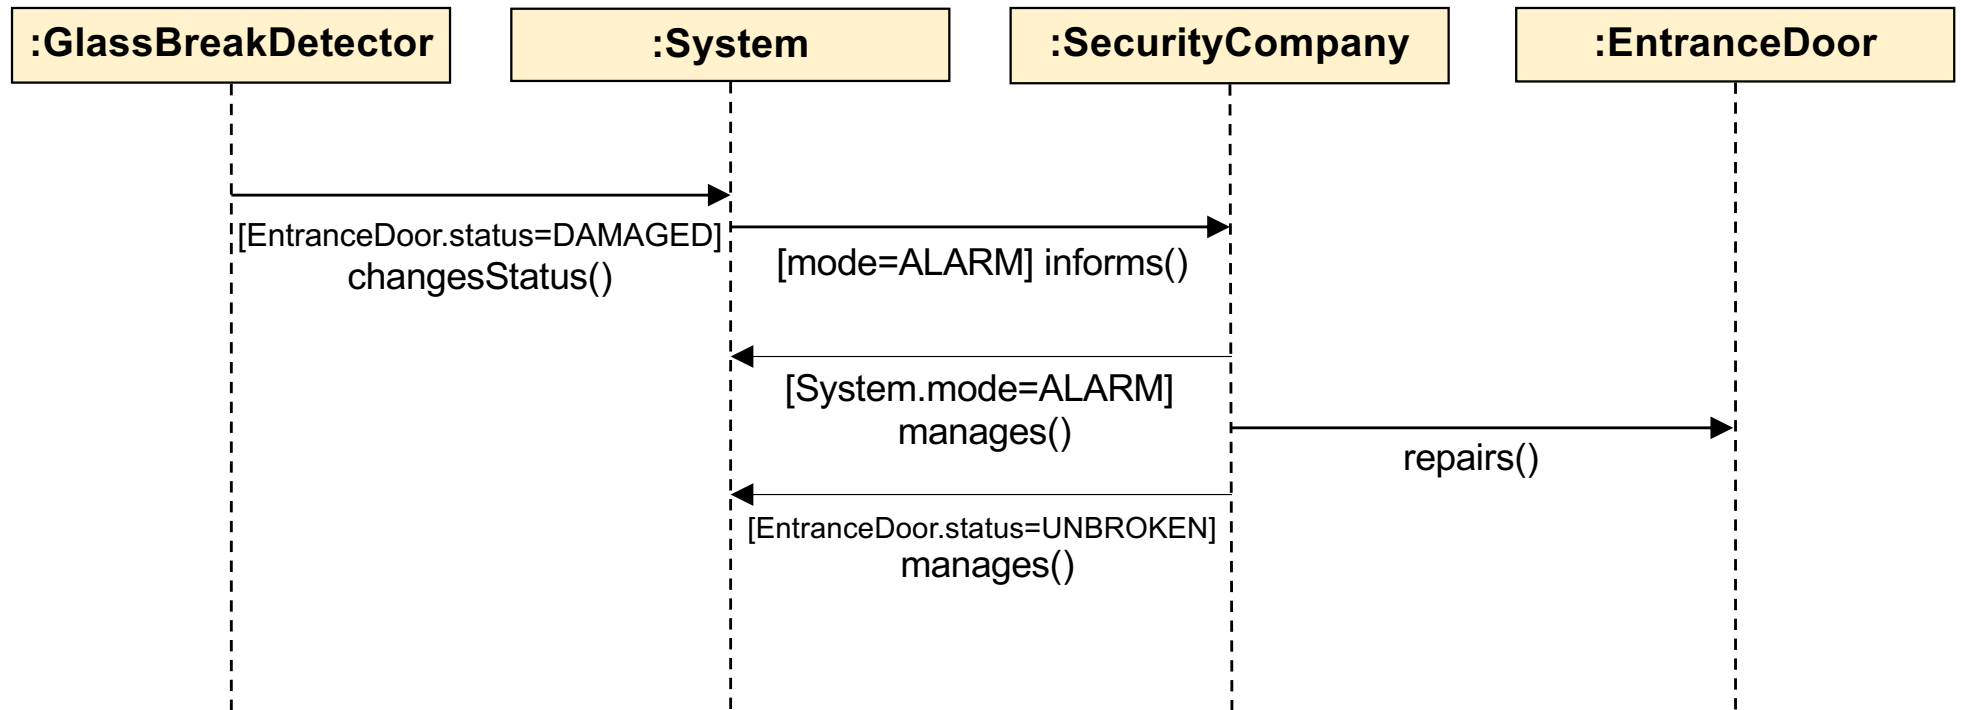

Updated after Behavioural analysis

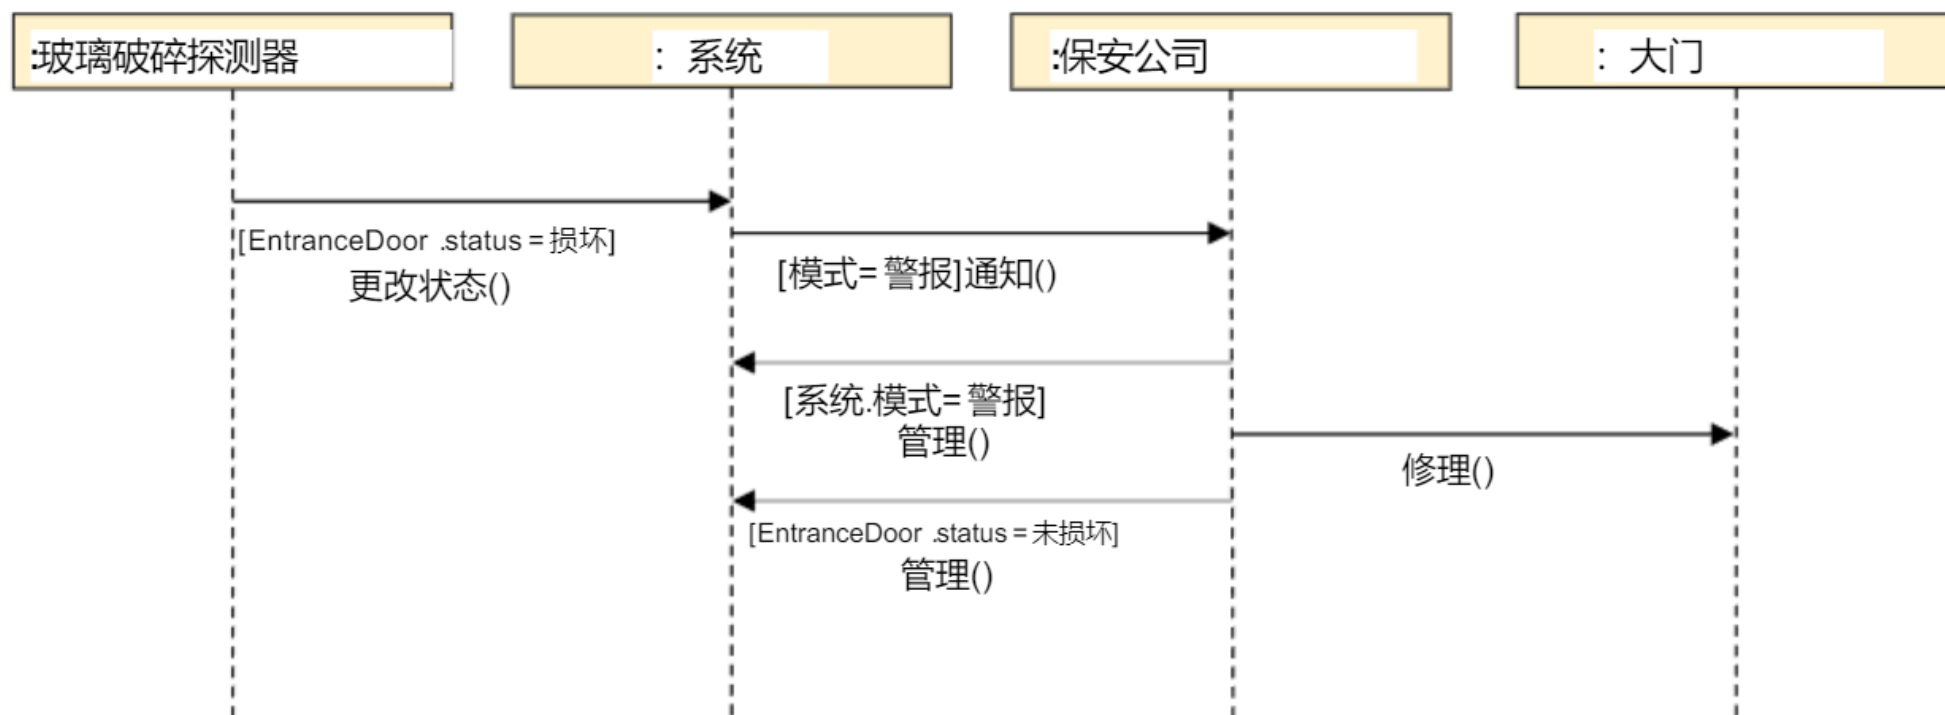

静态模型： 行为分析后更新

Functional model

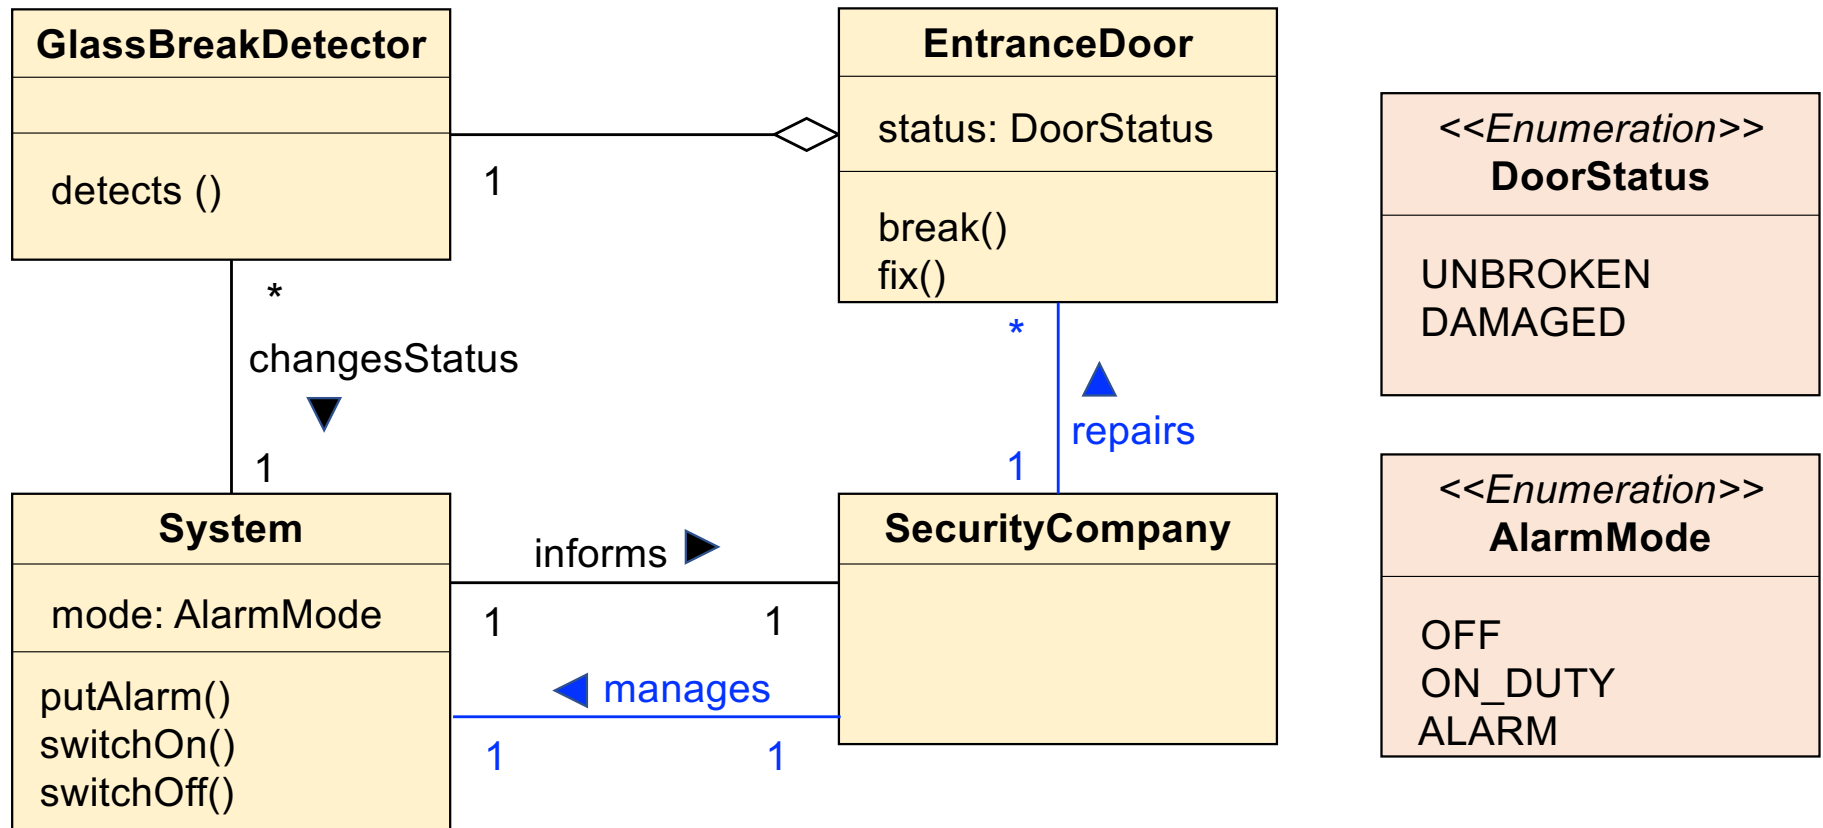

功能模型

Static model:

Updated after **Functional** analysis

静态模型： 功能分析后更新
